

The World of Tattoos

By: Karen Bonilla

What is a Tattoo?

- *form of body modification, made by inserting ink, dyes and pigments, either indelible or temporary, into the dermis layer of the skin to change the pigment.* (google.com)

How the needle works

- A needle penetrates 3 main layers of skin (Epidermis, Dermis, Subcutaneous)
- If needle ink does not get to that layer, probability tattoo will start to fade in the 1 1st week or so
- Solid needle up and down to puncture the skin between 50 and 3,000 times per minute (google.com)
